

Capstone Project abstract

CKM136XJ0

Student: Emil Ibrahim
Student Id: 500862456

Ryerson University
Date: 18-Jan-2019

The theme:

Classification and Regression.

Datasets link:

https://www.kaggle.com/START-UMD/gtd#globalterrorismdb_0718dist.csv

Context:

Information on more than 180,000 Terrorist Attacks

The Global Terrorism Database (GTD) is an open-source database including information on terrorist attacks around the world from 1970 through 2017. The GTD includes systematic data on domestic as well as international terrorist incidents that have occurred during this time period and now includes more than 180,000 attacks.

Content:

Geography: Worldwide

Time period: 1970-2017, *except 1993*

Variables: >135 variables on location, tactics, perpetrators, targets, and outcomes ,....etc

Research question:

Can the success of a terrorism attack be predicted by knowing attack features?

Tools and Programing language for coding:

Python and different libraries: Pandas, matplotlib, seaborn, numpy, scipy,...etc
